

Safely Using the Boar Bot During Heat Checking Skill Checklist

Manager Instructions:

Your employee has completed Take 5 lesson, Safely Using the Boar Bot During Heat Checking. Now it is time to help your employee apply what they've learned in the barn. Use this checklist as a guide to cover some of the key learning objectives from the rodent control lesson.

- Employee can correctly and safely harness the boar and attach the rope to the boar's harness.
- Employee can safely secure the rope to the Boar Bot via a clamp or tie.
- Employee can effectively lead the boar(s) using the Boar Bot's remote control.
- Employee moves the boar away from exhaust fans instead of towards them, preventing refractory females.
- Employee knows what to do if the boars become aggressive or start fighting.
- Employee is aware of the farm's boar replacement program, and knows when a boar needs to be culled.
- Employee can correctly and safely return the boar to his stall and detach the rope and harness.

Employee: I have completed the above training experience. I feel confident that I can do this job on farm.
